

Task 1 :- Python List Methods

In [23]:

```
mynames = ["Joe", "zoe", "world", "Brad", "Angilina","world", "Zuki", "Tom", "paris", "world"]  
y = "USA" in mynames  
print(y)
```

False

Task 2 :- Check count of word "world"

In [24]:

```
mynames = ["Joe", "zoe", "world", "Brad", "Angilina","world", "Zuki", "Tom", "paris", "world"]  
y = mynames.count('world')  
print(y)
```

3

Task 3 :- Count of even and odd nos

In [25]:

```
count = 0  
count1 = 0  
for num in range(1,30) :  
    if(num%2==0) :  
        print(num , end = " ")  
        count = count + 1  
    else :  
        count1 = count1 + 1  
  
print ("The no of Even numbers are :", count)  
print ("The no of odd numbers are :", count1)
```

2 4 6 8 10 12 14 16 18 20 22 24 26 28 The no of Even numbers are : 14
The no of odd numbers are : 15

Task 4 :- Print first 5 even no

In [26]:

```
e1 = [ ]  
dataset = list(range(1,30))  
for num in dataset:  
    if(num%2 ==0) :  
        e1.append(num)  
print(e1[0:5] , "\n")
```

[2, 4, 6, 8, 10]

Task 5 :- Print last 2 odd no

In [27]:

```
e11 = [ ]  
dataset = list(range(1,31))  
for num in dataset:  
    if(num%2 !=0) :  
        e11.append(num)  
print (e11[-2:30])
```

[27, 29]

Task 7 :- Print Square of first and last element from list

In [28]:

```
count = 0  
for first in range(1,11):  
    first = first * first  
    print(first, end = " ")  
for second in range(30,41):  
    second = second * second  
    print (second , end = " ")
```

1 4 9 16 25 36 49 64 81 100 900 961 1024 1089 1156 1225 1296 1369 1444 1521
1600

Task 6 :- Print User- enter sting

In [1]:

```

x = [ ]
y = [ ]
for a in range(0,5):
    x.append(input("Enter value : "))
    print("string x : ",x)
    y.append (input ("enter value :"))
    print("string y :",y)
print ("string x :",x)
print ("string y :",y)

```

```

Enter value : 1
string x : ['1']
enter value :5
string y : ['5']
Enter value : 2
string x : ['1', '2']
enter value :6
string y : ['5', '6']
Enter value : 3
string x : ['1', '2', '3']
enter value :7
string y : ['5', '6', '7']
Enter value : 4
string x : ['1', '2', '3', '4']
enter value :8
string y : ['5', '6', '7', '8']
Enter value : 5
string x : ['1', '2', '3', '4', '5']
enter value :9
string y : ['5', '6', '7', '8', '9']
string x : ['1', '2', '3', '4', '5']
string y : ['5', '6', '7', '8', '9']

```

Task 8 :- Print Table

In [6]:

```

n = int(input("Enter table no :"))
for first in range(1,11):
    p = n*first
    print(n, "*",first , "=", p )

```

```

Enter table no :5
5 * 1 = 5
5 * 2 = 10
5 * 3 = 15
5 * 4 = 20
5 * 5 = 25
5 * 6 = 30
5 * 7 = 35
5 * 8 = 40
5 * 9 = 45
5 * 10 = 50

```
